

Extended perishable-inventory comparison

One query (n=3) Best of 8 (n=3) Evolution (n=3) Baek-style L2 (n=3)

Average cost across generated policies

Evolution vs Baek-style L2

Points average all available generations shown in the legend; cost whiskers show 1 generation SD when $n > 1$.

Right-hand intervals: paired 95% demand-path CIs, conditional on the fixed policies; they exclude generation uncertainty.

All test generations are retained. Shading: withheld-feedback cases for numerical arms only; Baek knows the full family.
